

ZETA-THREE USER BULLETIN #24

Announcement:

Zeta-Three Software Version 3.71

Zeta-Three^{em} Software Version 3E71

May 5, 1992

Zeta-Three Software Versions 3.71 and 3E71

As a part of Adams-Smith's continuing support program for this product, software versions 3.71 and 3E71 have just been released and offer the following new features and improvements:

- The Zeta-Three now fully supports operation with Neve Flying Faders version 3.0 for transport control and synchronization.
- The Soundcraft transport libraries have been revised for Zeta-Three, correcting a problem in versions 3.70/3E70 that prevented loading of library constants for the Soundcraft 760 transport.

Zeta users who have software older than 3.70/3E70 should also refer to Zeta User Bulletin #23 for a complete description of features and enhancements available when upgrading to versions 3.71 or 3E71.

Note: RAM requirement of software version 3.71

Zeta-Three software version 3.71 requires that the non-volatile RAM, at location U74, be a Dallas DS1230Y (or DS1235Y*). If the Zeta does not have a DS1230Y (or DS1235Y*) installed at U74, a non-volatile RAM expansion kit must be installed prior to installation of software version 3.71. Zetas shipped from the factory with software version 3.50 or higher are unlikely to need modification.

*This part discontinued by manufacturer.

Zeta Software Version 3.71 EPROMs, with all supporting documentation, are available to current Zeta-Three and Zeta-Three "B" owners at \$195.00 per set.

Zeta Software Version 3E71 EPROMs, with all supporting documentation, are available to current Zeta-Three^{em} owners at \$210.00 per set.
